

Utilizing HiBiT TCK Bioassays To Validate Cell Therapy & mAb- Mediated Immunotherapy Potency

Nicholas J. Hess
Associate Product Manager

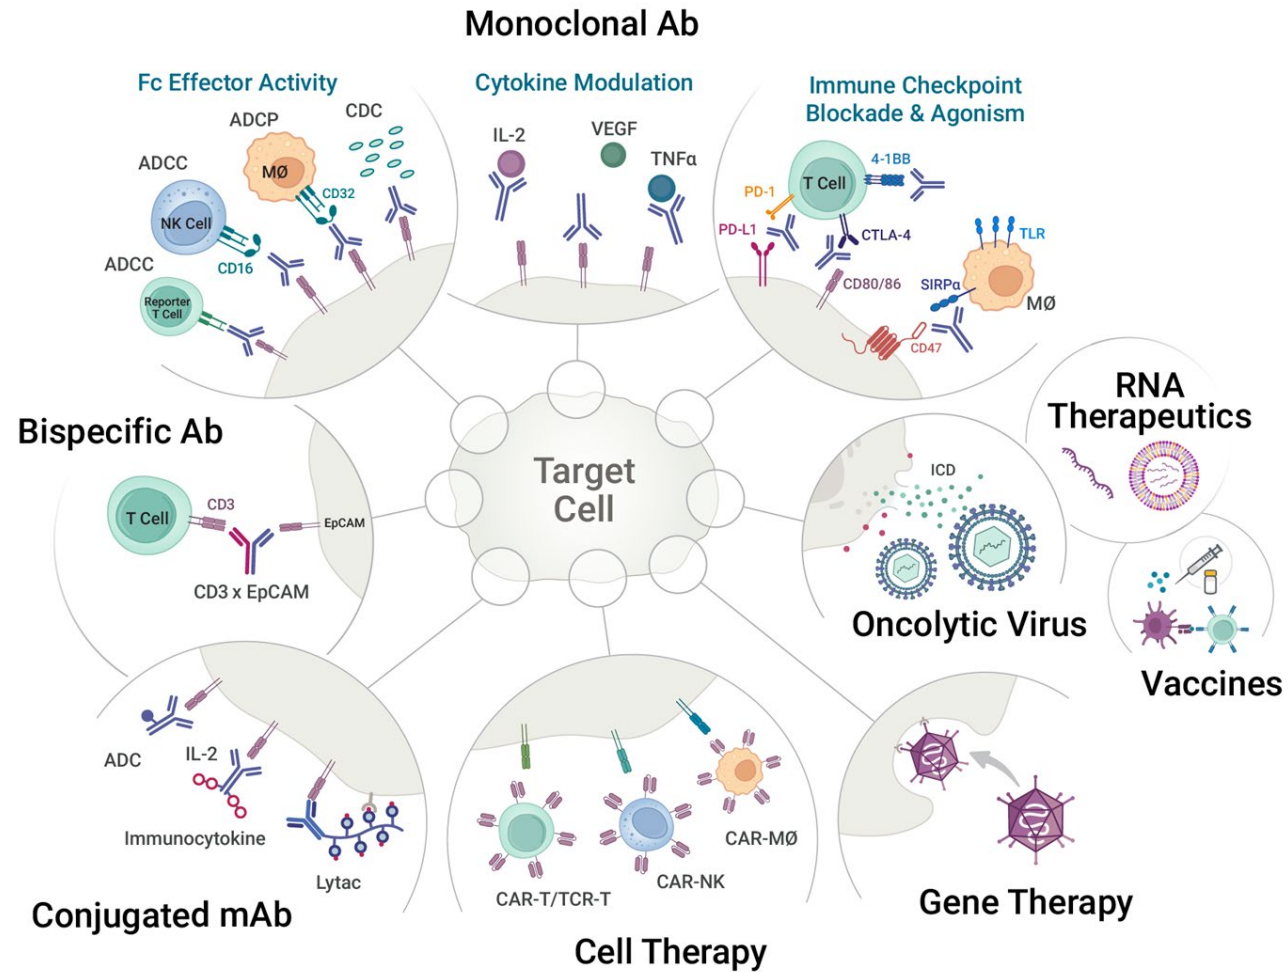

Our Mission

Provide innovative biological reagents and integrated systems used in research and applied technology worldwide.

The Promega Approach!

Portfolio of Products

The Promega Approach!

Product Formats

Propagation Model

 1 - 2 weeks

Standard Cell Culture

Cell Counting,
Centrifugation,
Resuspension,
Plating

Add assay,
Measure bioluminescence

Challenges

- ❖ Cell culture is labor intensive and expensive
- ❖ Daily cell culture duties can lead to high run-to-run variation

T&U Model

 3 - 24 hours

Thaw-And-Use Cells

~~Cell Counting,
Centrifugation,
Resuspension,
Plating~~

Add assay,
Measure bioluminescence

Benefits

- ✓ Simple & convenient
- ✓ Time & cost savings
- ✓ Consistent results
- ✓ Easy lab-to-lab transfer
- ✓ Automation-ready

Functional Potency Testing Luminescence Technology

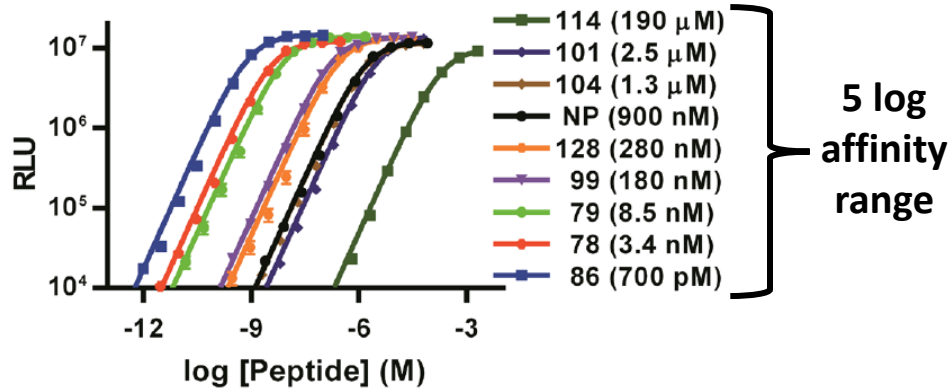

Hall, M. P. et al. Engineered Luciferase Reporter from a Deep Sea Shrimp Utilizing a Novel Imidazopyrazinone Substrate. *ACS Chem. Biol.* 7, 1848–1857 (2012).

NanoLuc is a blue-emitting luciferase with 100X brighter signal than Renilla/Firefly/Beetle luciferases

SmBiT: VTGYRLFEEIL **HiBiT:** VSGWRLFKKIS

Screen 350 peptides w/ LgBiT

Through complementation studies, we have developed a split NanoLuc with a small, stable, high affinity tag

Functional Potency Testing

Targeted Cell Killing (TCK) Concept, Workflow & Advantages

- HiBiT peptide stable in medium for >3 days
- Little/no background from HiBiT “leaking” from target cell
- HiBiT conjugated to HaloTag (HT) or N-terminus of LDH

Functional Potency Testing

Targeted Cell Killing (TCK) Concept, Workflow & Advantages

Comparing Cytotoxicity Assays	HiBiT TCK	Flow Cytometry	Fluorescent Dyes	IncuCyte
Processing Time				
Signal: Noise				
Analysis				

- Gain-of-signal assay
- No loading, staining or washing steps
- Robust s/n ratio with as little as 2k target cells
 - Luminescence measured using a standard luminometer
- Simple analysis to measure % lysis

Functional Potency Testing

TCK Portfolio

11 unique cell lines
+4 KOs

Blood Cancer Targets

-  B cell Lymphoma/Leukemia lines (**Raji** & **Ramos**)
expressing **CD19**, **CD20** and **CD22**
and **CD19-KO**, **CD20-KO**, and **CD19/20-KO** lines
-  Myeloid Leukemia line (**U937** & **K562**)
expressing **CD33** and **CLL-1**.
-  Multiple Myeloma line (**H929**)
expressing **BCMA** and **CD38**
-  T cell Leukemia line (**T2**)
expressing **CD5**, **CD7**, **CD30** and **CD52**

Solid Cancer Targets

-  Ovarian Carcinoma lines (**OVCAR3** & **SKOV3**)
expressing **HER2**, **MSLN**, **5T4**, **WT** and **MUC16**
and **MSLN-KO** line
-  Breast Adenocarcinoma line (**SK-BR-3**)
expressing **HER2** and **EpCAM**
-  Lung Carcinoma line (**A549**)
expressing **EGFR**
-  Melanoma line (**A375**)
expressing **HER2**, **CD70**, **B7-H3**

K562 expressing **CD19**, **BCMA**, **GPC3** and **MHC-II** (via CIITA insertion)

CHO-K1 expressing **Claudin 18.2**, **membrane TNF α** , **SARS-CoV-2 spike protein**

Functional Potency Testing

HiBiT TCK Controls

Spontaneous Release control (SR)

- Rate of SR depends on cell type & cell health

Maximum Release control (MR)

- Add digitonin for 100% lysis
 - MR, t = 0: Add digitonin at time zero
 - MR, end: Add digitonin with detection reagent

Functional Potency Testing

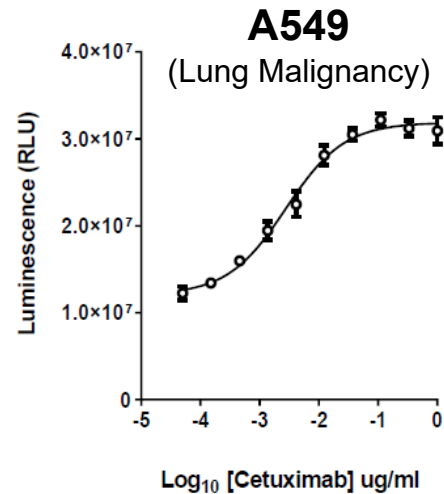

ADCC Applications Using PBMC

PBMC

5 Unique Donors

FcγRIIIa: VV (1), VF (2), FF (2)
 FcγRIIa: HH (1), HR (4)

- We have 3-6 qualified donors at any given time
- PBMCs are not pooled
- PBMC are qualified against 6 different TCK lines
 - Raji/Ramos w/rituximab
 - H929 w/daratumumab
 - SKOV3/SK-BR-3 w/trastuzumab
 - A549 w/cetuximab
- Each donor is genotyped and characterized
- Allows user to measure human variation in biologic potency

Functional Potency Testing

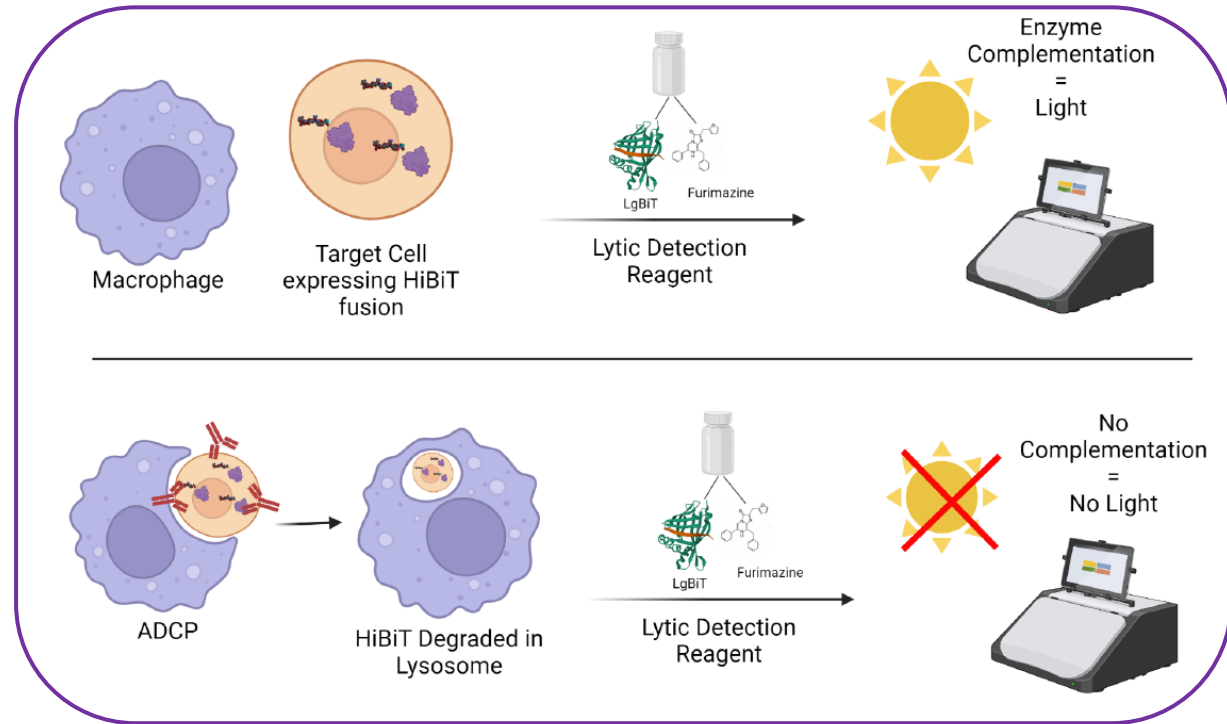

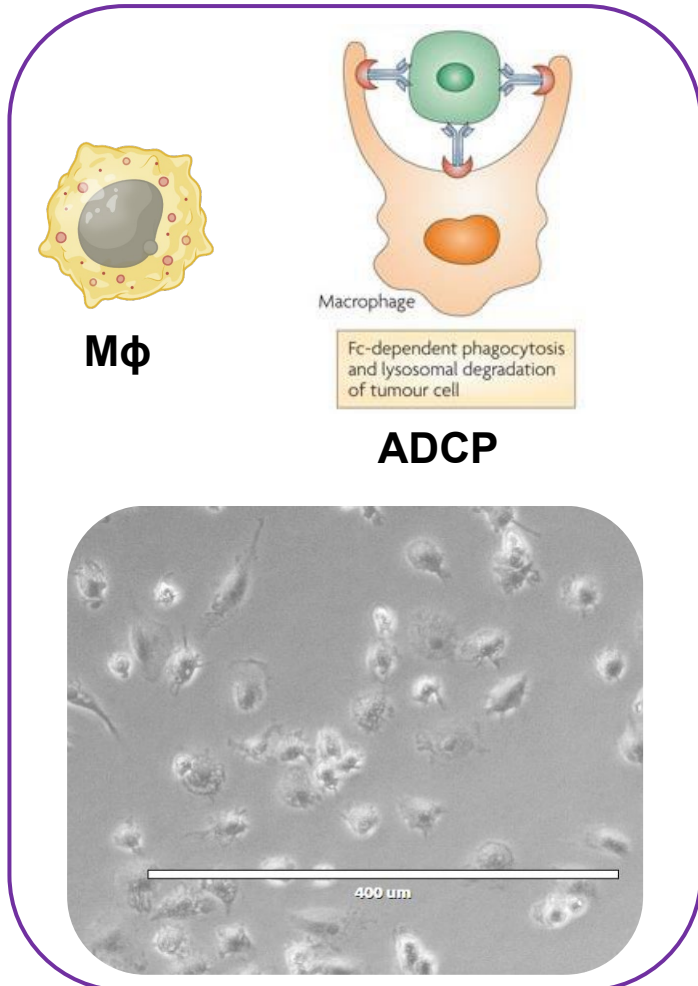

TDCC Applications Using CD8+ T cells

- We have 2-4 donors, qualified against 6 TCK lines at any given time
 - Raji/Ramos w/blinatumomab
 - H929 w/Teclistamab
 - SKOV3/SK-BR-3 w/Her-2 BiTe
 - A549 w/EGFR BiTe
- Each donor is characterized for purity following expansion

Functional Potency Testing

ADCP Applications Using Macrophages

- Primary human monocytes are isolated and cultured for 5-7 days
- IFN γ used prior to assay to mature M ϕ into an M1 phenotype

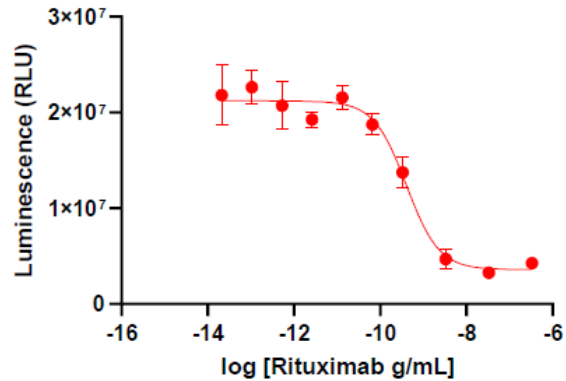

Functional Potency Testing

ADCP Applications Using Macrophages

Mφ

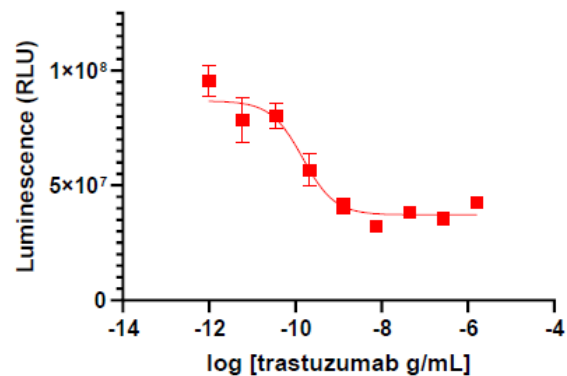

ADCP of Ramos/HiBiT

ADCP of Ramos/HiBiT

ADCP of SKBR3/HiBiT

ADCP of SKBR3/HiBiT

- Currently have 2 qualified donors
- Mφ are qualified against 6 different TCK lines
 - Raji/Ramos w/rituximab
 - H929 w/daratumumab
- SKOV3/SK-BR-3 w/trastuzumab
 - A549 w/cetuximab

Functional Potency Testing

CAR-T Applications

- Homebrew CAR-T (α CD19-41BB-CD3z)
- 2,500 target cells/well
- 24 hr incubation

- ProMab PM-CAR1031-1M (α BCMA-4-CD28-CD3z)
- 1,500 target cells/well
- 24 hr incubation

Suitable For Various Time Points

Functional Potency Testing

Testing Antigen Specificity

“... capacity of CAR T cells to secrete cytokines and mediate cytolysis should be restricted in an antigen-dependent manner, which can be tested by exposure to various cells that vary in their expression of the target antigen.”

*FDA Guidance on Considerations for the Development of CAR T Cell Products, 2024

- Specificity of biologic can be determined by either:
 - Using mAb against antigen not expressed on line or;
 - KO-target antigen

Summary

HiBiT Target Cell Killing assay

- Gain-of-signal assay for target cell killing
- No signal contribution from effector cells
- Add-mix-read, non-lytic format
- Low numbers of target cells
- CRISPR KO cell lines to measure target-independent killing

Blood Cancer Targets

-  B cell Lymphoma/Leukemia lines (**Raji & Ramos**) expressing **CD19**, **CD20** and **CD22** and **CD19-KO**, **CD20-KO**, and **CD19/20-KO** lines
-  Myeloid Leukemia line (**U937 & K562**) expressing **CD33** and **CD11b**.
-  Multiple Myeloma line (**H929**) expressing **BCMA** and **CD38**
-  T cell Leukemia line (**T2**) expressing **CD5**, **CD7**, **CD30** and **CD52**

Solid Cancer Targets

-  Ovarian Carcinoma lines (**OVCAR3 & SKOV3**) expressing **HER2**, **MSLN**, **5T4**, **WT** and **MUC16** and **MSLN-KO** line
-  Breast Adenocarcinoma line (**SK-BR-3**) expressing **HER2** and **EpCAM**
-  Lung Carcinoma line (**A549**) expressing **EGFR**
-  Melanoma line (**A375**) expressing **HER2**, **CD70**, **B7-H3**

Promega

Thank you!
